IPv6-What and Where It Is (*continued*)

Components of the 6bone

The 6bone provides this needed IPv6 transport over the public Internet infrastructure, relying on:

- Dual IPv4/IPv6 stacks in the client host
- IPv6 packets encapsulated (tunneled) in IPv4 packets
- Dual IPv4/IPv6 stack backbone routers that know IPv6 routes of 6bone participants
- DNS that supports IPv6 AAAA records
- A 6bone Routing Registry to keep track of sites and their tunnels
- A mailing list, various IPv6 tools, and a 6bone Web site at: www.6bone.net

Figure 3 shows a conceptual overview of how a basic 6bone is structured and a picture of the current 6bone backbone structure can be seen at: <http://www.cs-ipv6.lancs.ac.uk/ftp-archive/6Bone/Maps/full-backbone.gif>

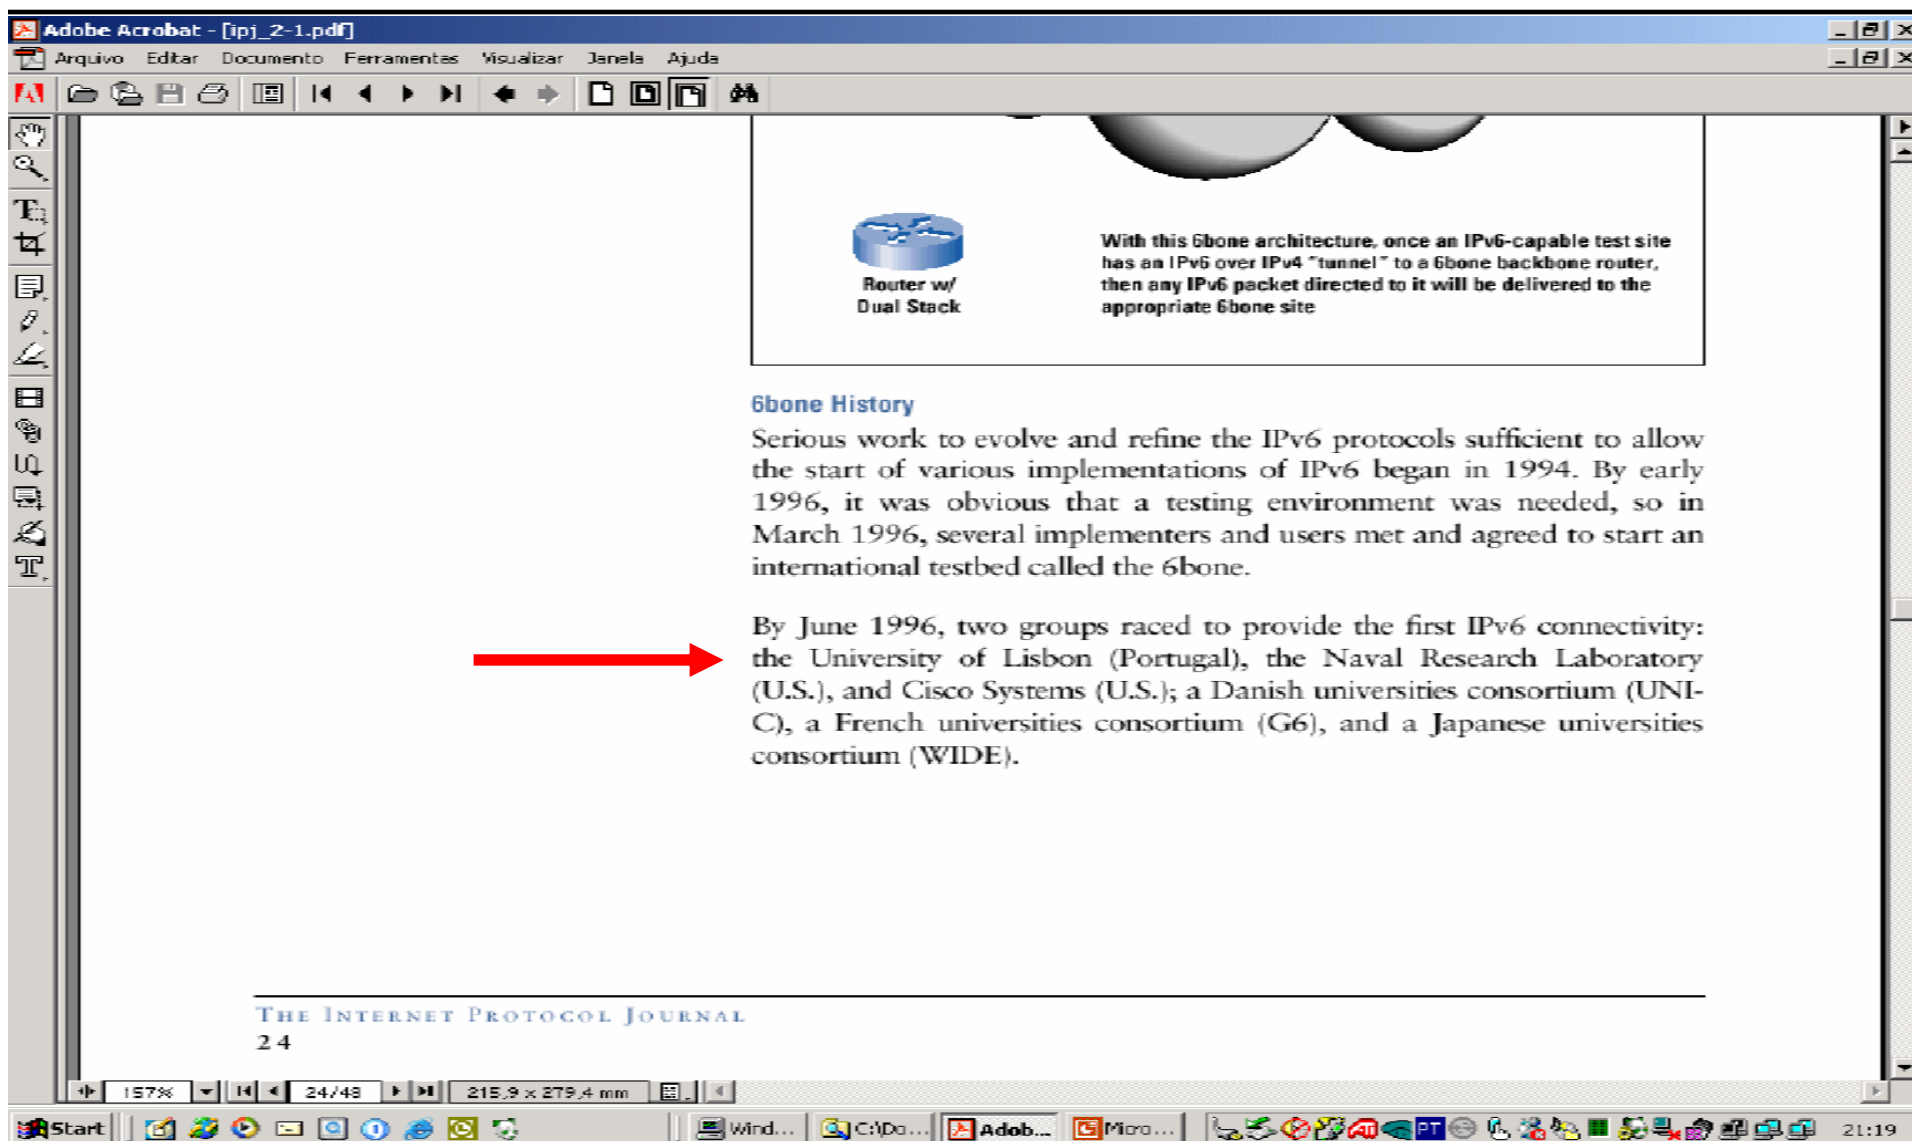

with the pseudo TLA site-to-site peering indicated by various colored links.

To date, the 6bone has spread to 260 organizations in 39

Router w/
Dual Stack

With this 6bone architecture, once an IPv6-capable test site has an IPv6 over IPv4 "tunnel" to a 6bone backbone router, then any IPv6 packet directed to it will be delivered to the appropriate 6bone site

6bone History

Serious work to evolve and refine the IPv6 protocols sufficient to allow the start of various implementations of IPv6 began in 1994. By early 1996, it was obvious that a testing environment was needed, so in March 1996, several implementers and users met and agreed to start an international testbed called the 6bone.

By June 1996, two groups raced to provide the first IPv6 connectivity: the University of Lisbon (Portugal), the Naval Research Laboratory (U.S.), and Cisco Systems (U.S.); a Danish universities consortium (UNI-C), a French universities consortium (G6), and a Japanese universities consortium (WIDE).

US-led Initiatives

Moonv6

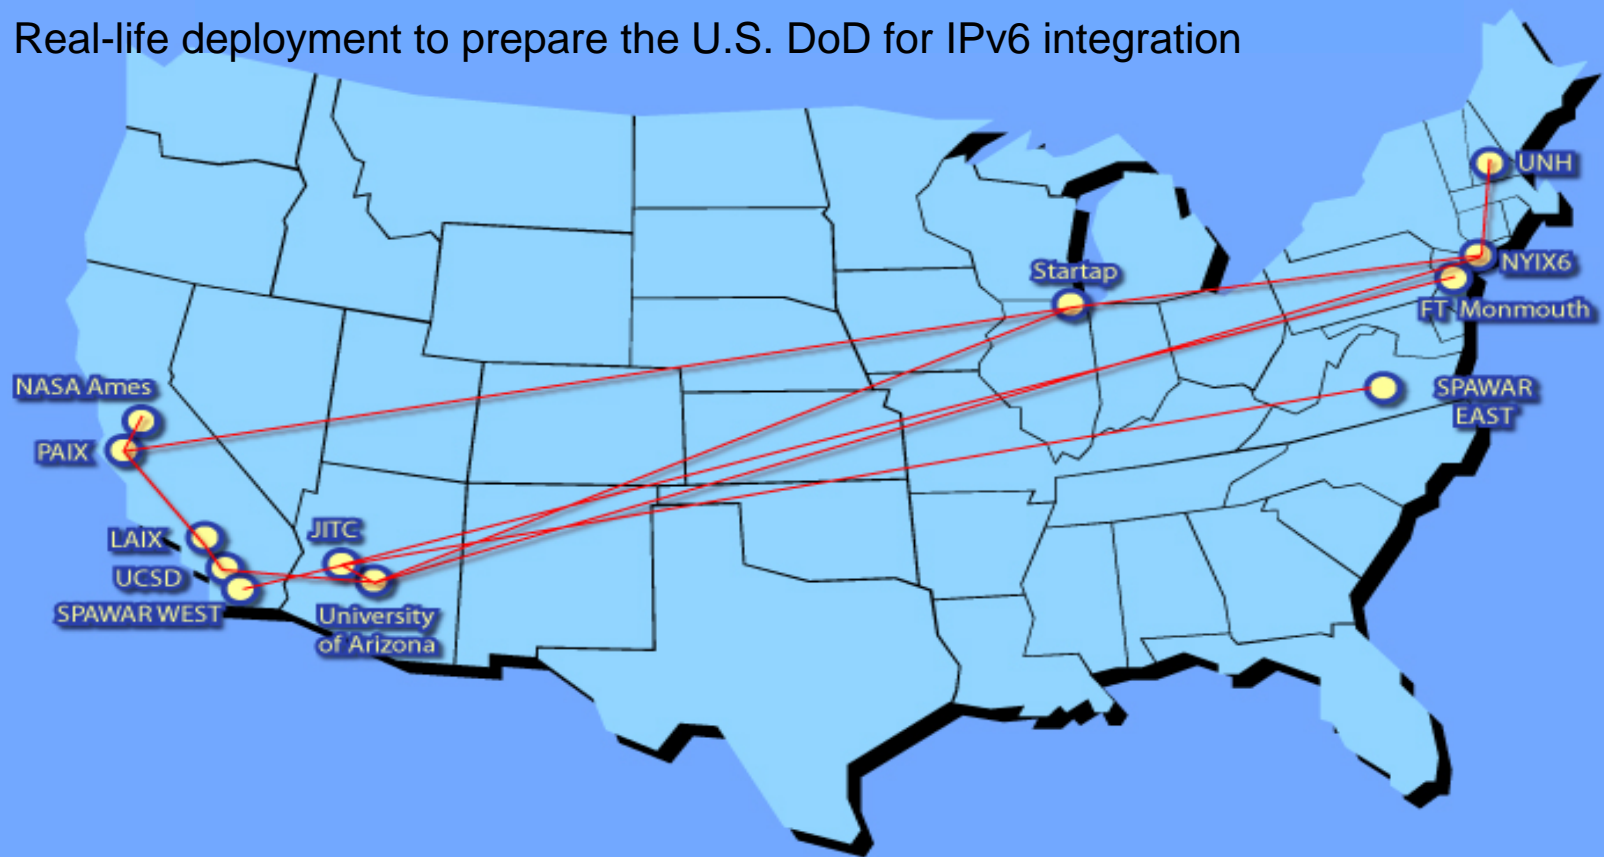

Metronet6

Occaid

Moonv6 (2003 – 2008)

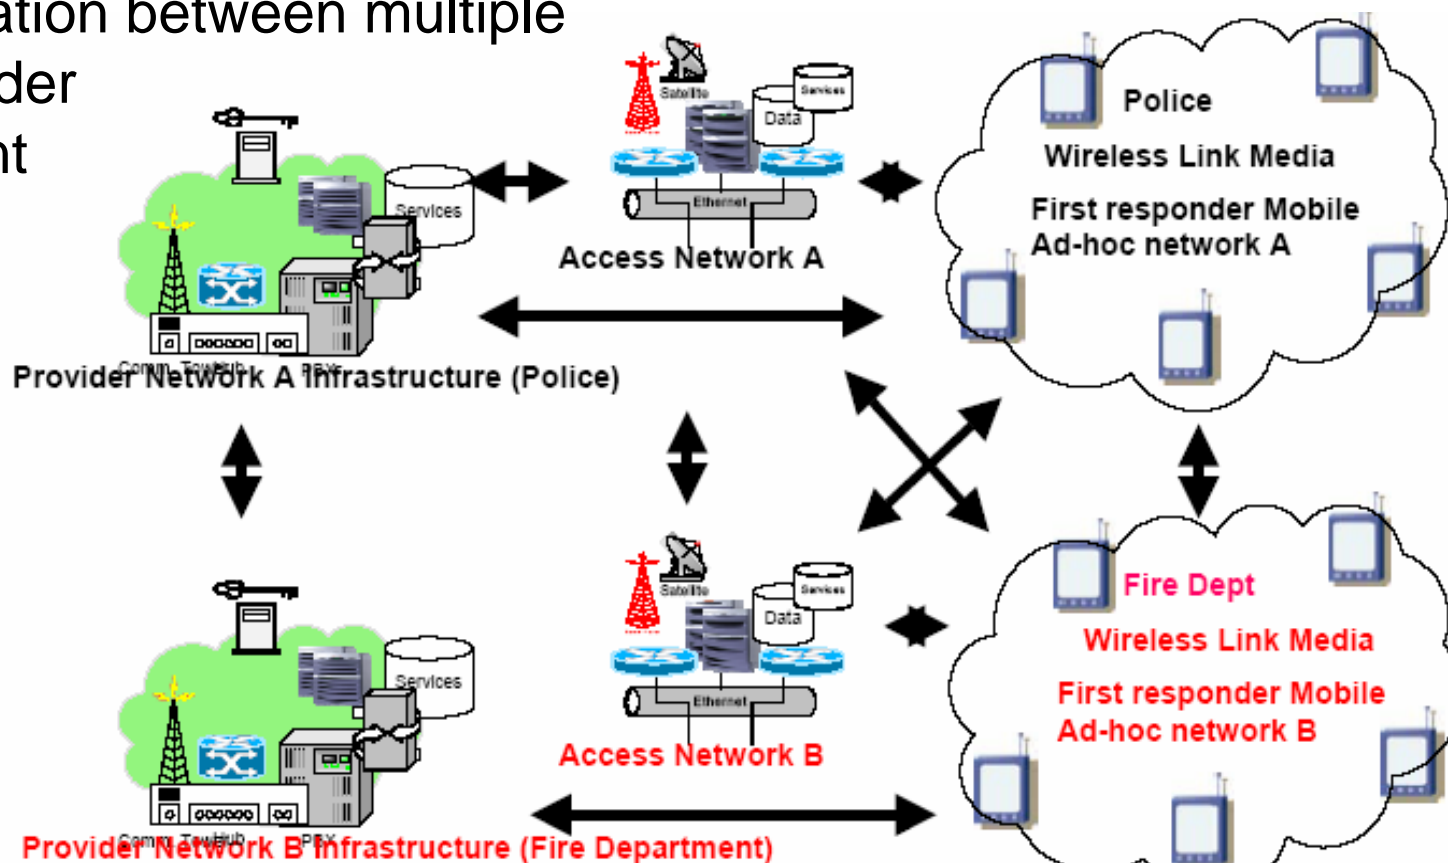

Joint collaboration between Joint Interoperability Test Command (JITC), DoD agencies, Internet-2, University of New Hampshire-Interoperability Lab, and the North-America IPv6 Task Force

Real-life deployment to prepare the U.S. DoD for IPv6 integration

Metronet6 (2006 –)

Communication between multiple
first responder
Independent
networks

Note: Metropolitan EMN Internet Network does not exist in this use case example.

Metronet6 (2006 –)

MetroNet6 supports the ability for a command center to be established in an Ad Hoc manner to communicate with the MetroNet6 Homeland Security Force and National Homeland Security Office using wireless or broadband communications.

MetroNet6 should be able to add additional Ad Hoc Sub-Networks as required such as the National Guard, Air Command, or other U.S. Agencies that must connect to the MetroNet6 during a disaster.

A Press Release was issued on 8th November 2006, concerning collaboration between Metronet6 and u-2010 (EU-IST project), the IPv6 task Force and the IPv6 Forum.

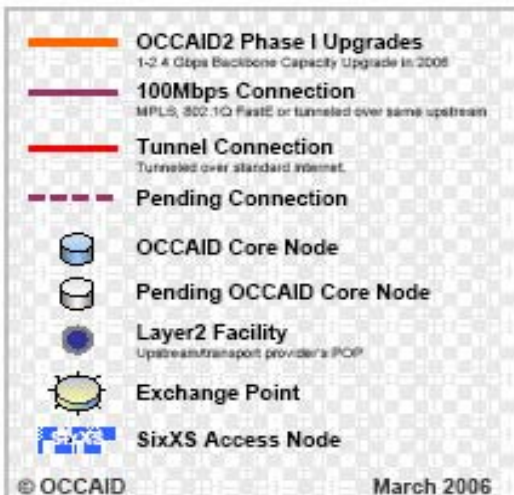

OCCAID

OCCAID : Open Contributors Corporation for
Advanced Internet Development

It is a collaboration between research communities and ISPs, working to develop and deploy Next Generation Network technologies for the enrichment of commercial and advanced Internet applications

OCCAID R&D Backbone Network

3rd Concertation meeting on e-Infrastructure Specific theme: FP6-funded test-beds – 20/11/2006

South America-led Initiatives

ALICE
RedCLARA

ALICE (2003 – 2006)

ALICE: America Latina Interconectada Con Europa

€12.5M from the EC represents 80% of constructing and operating the RedCLARA network
(the other 20% comes from the LA partners)

The goal was to develop an IP research network infrastructure within the Latin American region and towards Europe.

RedCLARA Network

u-Japan Policy

Working Toward Realizing the Ubiquitous Network Society by 2010

u-Japan Policy Overview

A detailed overview of the Ministry of Internal Affairs and Communication's u-Japan Policy and concrete issues.

Examples of ICT usage
in u-Japan society

- Contributing to Future Deployment of e-Japan Strategies
- The Potential of ICT to Resolve Social Problems
- The u-Japan Concept
- Structure of the "u-Japan Policy Package"

Basic u-Japan Concept

MIC

u-Japan is the next generation ICT society from 2010

u-Japan (Ubiquitous Japan)

Ubiquitous

Connects everyone and everything

- An easy-to-use network anytime, anywhere, with anything and for anyone.
 - ICT will be everywhere in daily life for a user-friendly society
- Person2Person plus Person2Goods, and Goods2Goods
 - In every aspect, communication will take the more important role in society

Universal

User-friendly

- Gentle with people
 - Can be used by anyone without thinking of the equipment or network
 - The aged and disabled will be able to participate in society with ICT
- Interaction
 - A heart to heart interaction overcoming barriers between generations and localities to create togetherness

User-oriented

From the user's point of view

- Close to the user
 - For a society that is user-orientated than a society where objects are given by the supplier
 - Developing technologies and services that are connected to our needs

Unique

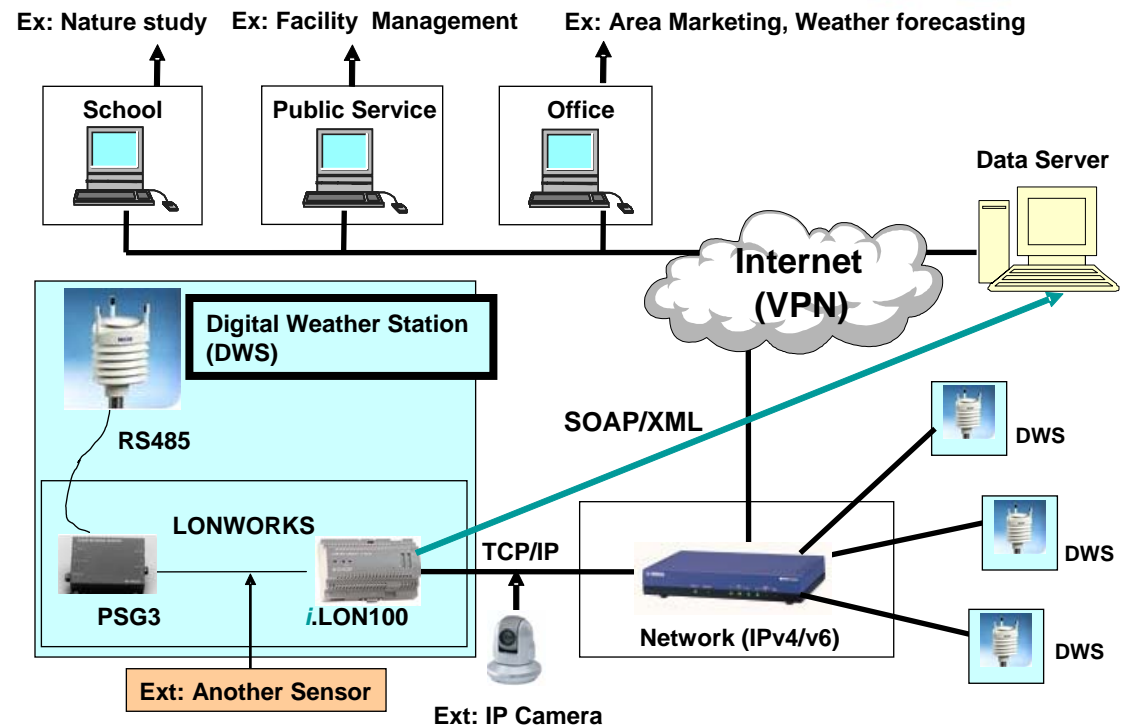

Be something special

- Create individual energy
 - A new society where your dreams come true
- Vitalize the society
 - Create new social systems and business services
 - Get out from the norm and realize local revitalization with creativity

Live-e! (2006 –)

- The goal is to gather, process, and share “Environmental Information”, worldwide
- “Environmental Information” is collected by “Digital Weather Station”, IP cameras, etc. that are set up by individuals and organizations voluntarily.
- Simple “Digital Weather Stations” acquire weather information with low cost and send the information to a data server via the Internet and JGN2 (Japan Gigabit Network).
JGN2: <http://www.jgn.nict.go.jp>
- Targeted at education, public service and businesses.

Nautilus6 (2003-

www.nautilus6.org

- focus on mobility aspects
- a WG in the WIDE project: www.wide.ad.jp

The WIDE Project (“technology bringing society together”)

- Launched in 1988
- They aim to provide global connection between computers and all other equipment, to bring to the fore the relative issues and problems
- They claim the world's first undertaking of IPv6

CNGI (2004 –)

- Led by China Government
- National IPv6 backbone built independently by the participants and interconnected by at least 2 IPv6 IXs
- Total funding from government and the carriers will be 170M\$
- Includes 5 major carriers + NREN
 - China Telecom, China Unicom, China Netcom/CSTNET, China Mobile, China RailCom and CERNET
- Aiming for, by the end of 2006:
 - 39 GigaPOPs
 - >300 CPNs
 - Nationwide coverage

Other Asian URLs

- IPv6 Promotion Council: www.v6pc.jp
- KAME Project: www.kame.net
 - a free stack of IPv6, IPsec, and Mobile IPv6 for BSD variants
- TAHI Project: www.tahi.org
 - IPv6 validation, since 1988
- USAGI (UniverSAI playGround for Ipv6) Project: <http://www.linux-ipv6.org/>
 - linux IPv6 development led by Jun Murai
- DVTS Consortium: www.dvts.jp (in Japanese)
- Internet ITS Consortium: www.internetits.org
 - Internet for cars
- AI3 : www.ai3.net
 - operates a satellite based testbed network in SE Asia
- JPNIC : www.nic.ad.jp
 - National Internet registry for Japan

Africa-led Initiatives

AfriNIC/AfNOG
IPv6 training
across Africa

AfriNIC/AFNOG

AfriNIC is the Regional Internet Registry for Africa

AfriNIC's mission is:

- to provide the professional and efficient distribution of Internet number resources to the African Internet community
- to support Internet technology usage and development across the continent
- to strengthen self Internet governance in Africa by encouraging a participative policy development

AfriNIC/AFNOG

The Africa Network Operators Group (AfNOG) is a forum for the exchange of technical information

It aims to promote discussion of implementation issues that require community cooperation through coordination and cooperation among network service providers to ensure the stability of service to end users

The goal of AfNOG is to share experience of technical challenges in setting up, building and running IP networks on the African continent

AfriNIC and AfNOG are running a series of IPv6 training courses throughout Africa, supported by Jordi Palet and 6DISS

6bone (1996 – 2006)

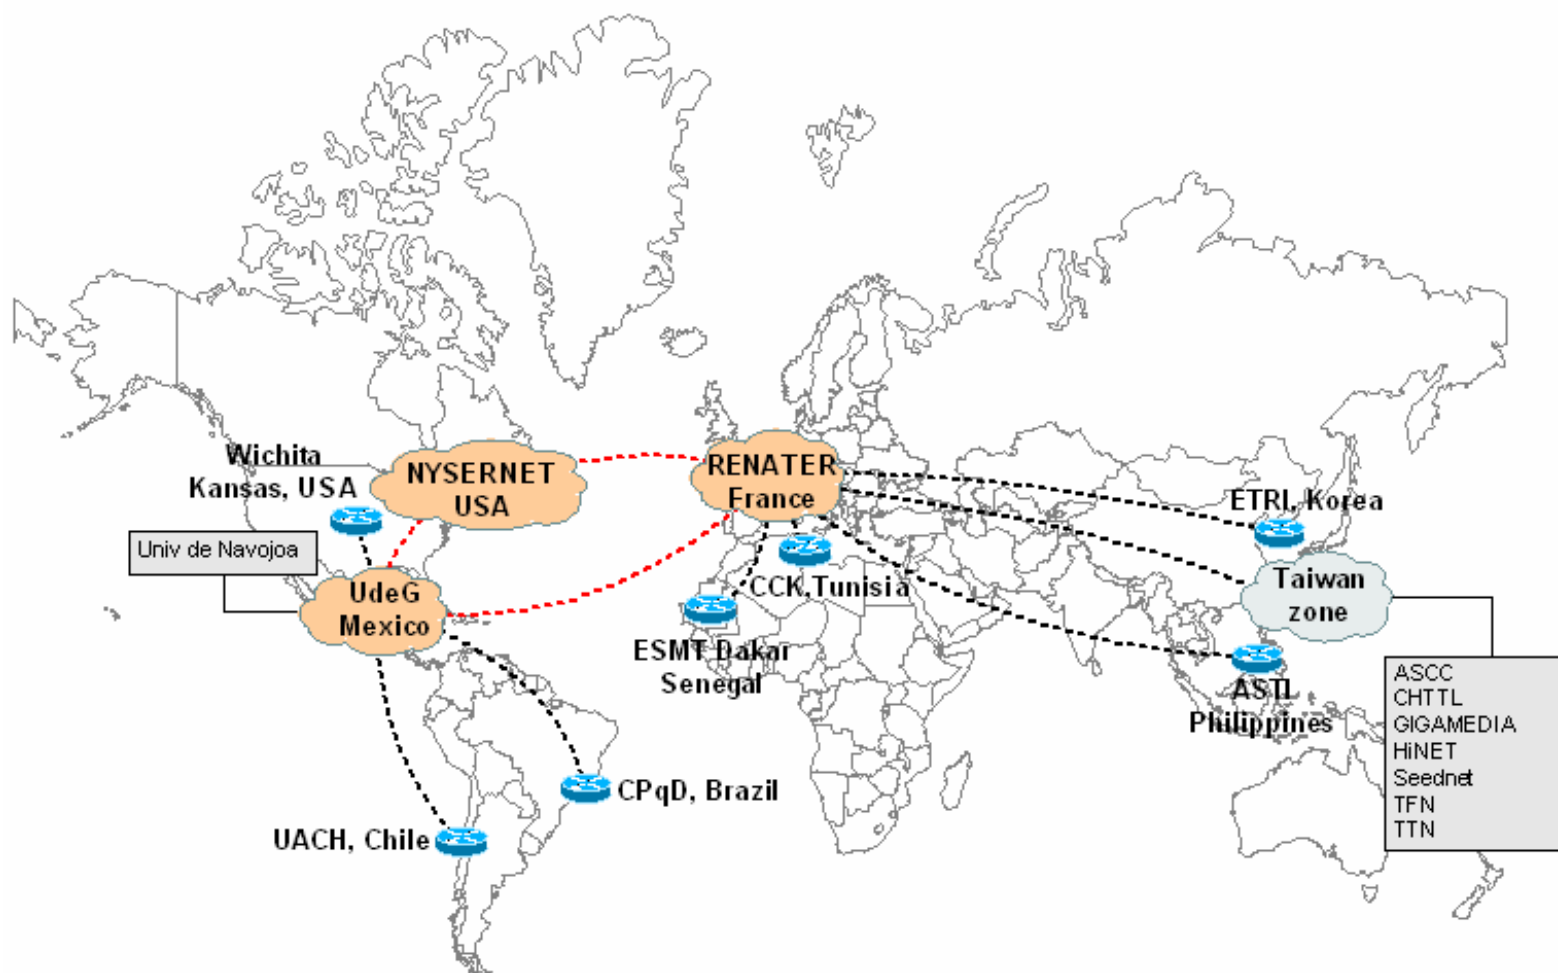

IETF: v6ops ngtrans

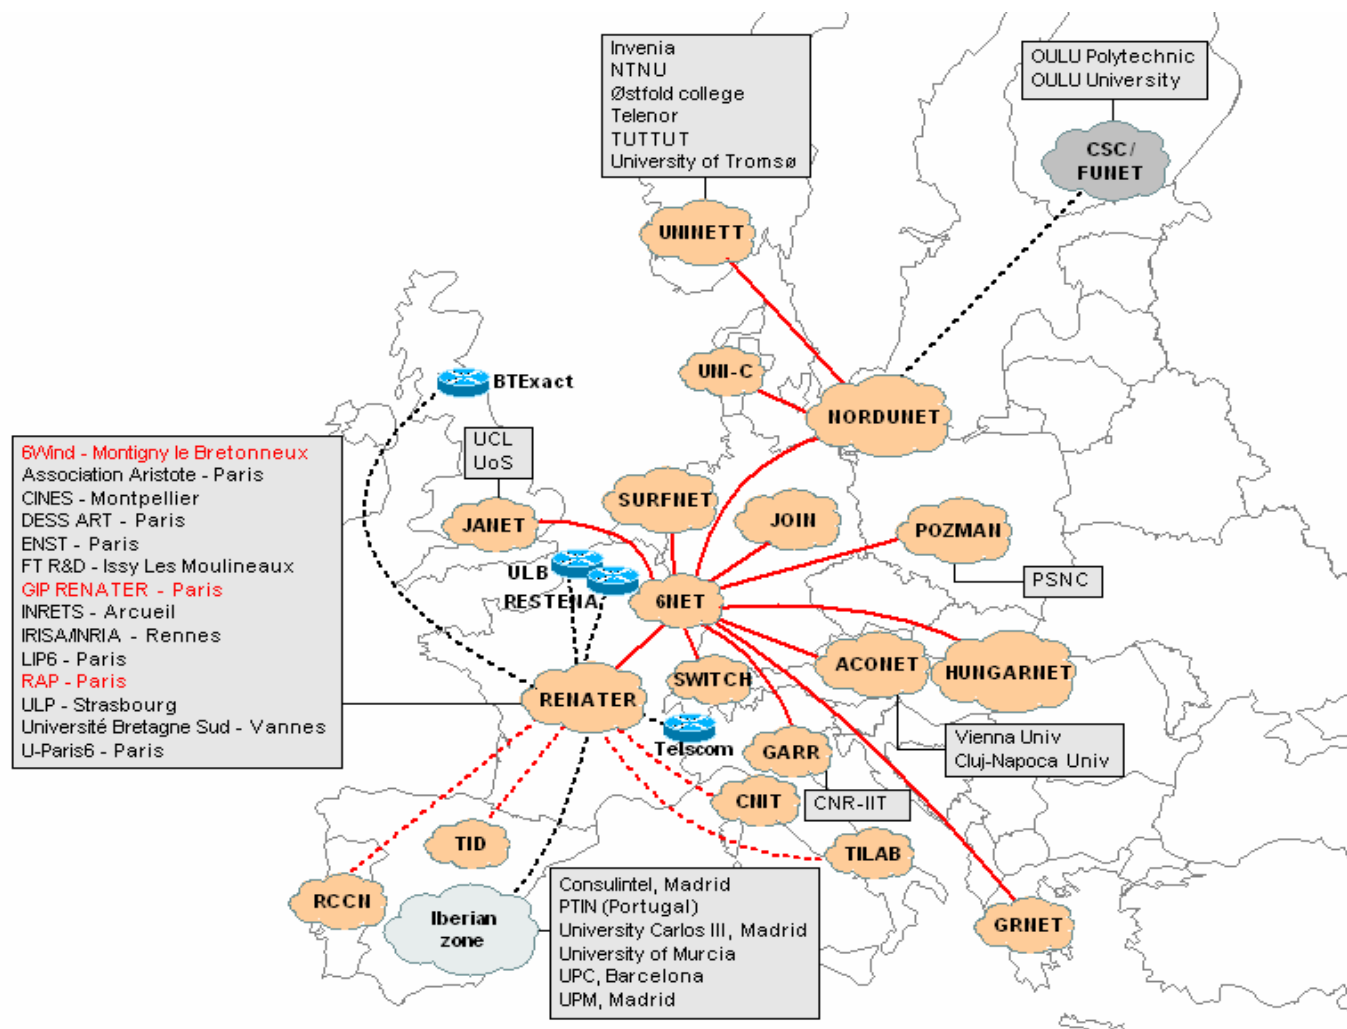

The 6bone was established in 1996 by the IETF as an IPv6 Testbed network to enable various IPv6 testing as well as to assist in the transitioning of IPv6 into the Internet.

Officially phased out in June 2006

M6bone

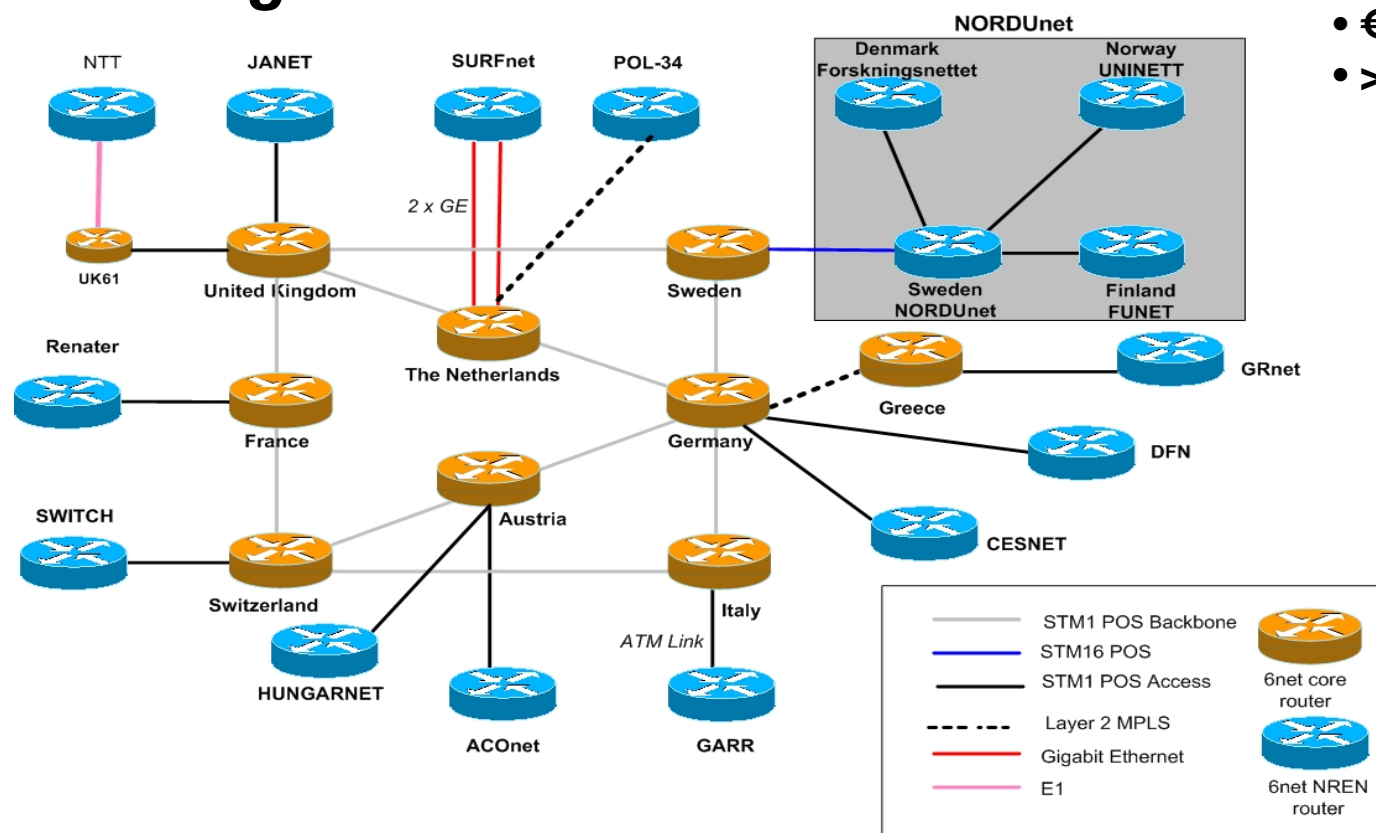

M6bone

6NET (2002 – 2005)

www.6net.org

- 3.5-year project
- €9.5M from EC
- >40 partners

**Cisco 12400
and 7200 series
routers**

Inter-continental connectivity to Internet-2, WIDE, KOREN

Euro6IX (2002 – 2005)

www.euro6ix.org

- 3+ year project
- €7.7M from EC
- 17 partners

- Targetted at Telcos, ISPs, ASPs
 - Network design
 - Applications
 - Standards
 - Dissemination

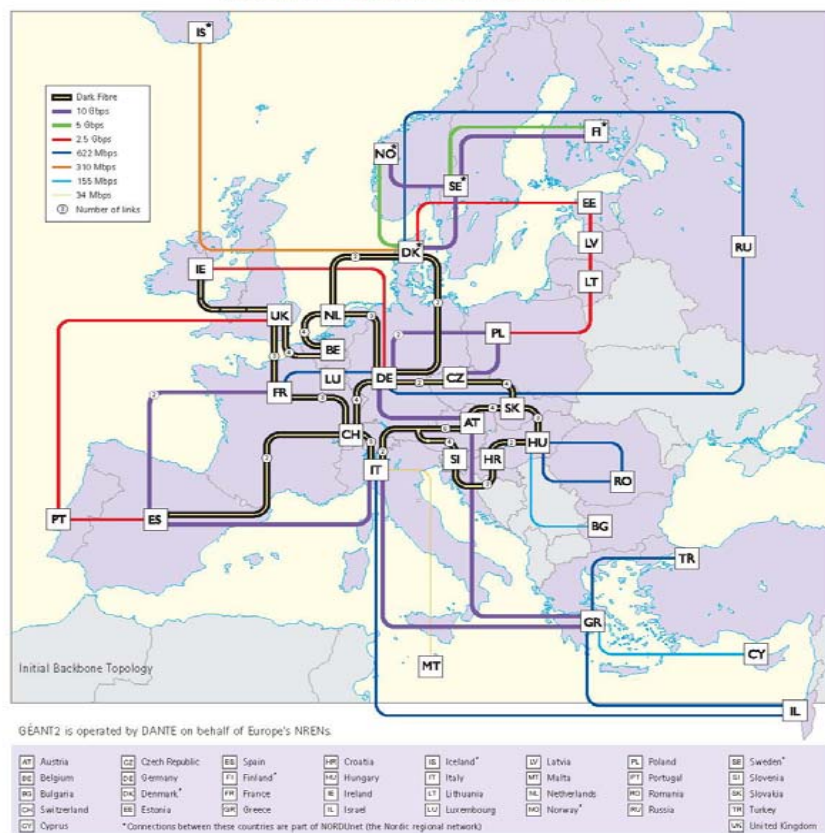

Pan-European IPv6 Backbone:

- London, Paris, Berlin, Madrid, Lisbon, Zurich, Turin

Intercontinental link to Japan,
via NTT

The world-leading research and education network for Europe.

★ Connect ★ Communicate ★ Collaborate

GÉANT2 is co-funded by the European Commission within its 6th R&D Framework Programme.

GÉANT2

2004 - 2008

The GÉANT2 network will connect 34 countries through 30 NRENs, using multiple 10Gbps wavelengths

Intercontinental connectivity to

- North America
- Latin America
- Asia-Pacific (India just added)
- North Africa
- South Africa
- Middle East

IPv**6DISS**emination and Exploitation

6DISS Objectives

1. To transfer our knowledge on IPv6 deployment to NRENs, Universities, commercial organisations, ISPs, governments and regulators in:
 - Africa (Southern, sub-Saharan and Mediterranean)
 - Asia Pacific Region
 - South and Central America
 - SE Europe
 - Newly-Independent States
 - The Caribbean
2. To help integrate organisations from the visited regions into subsequent European projects

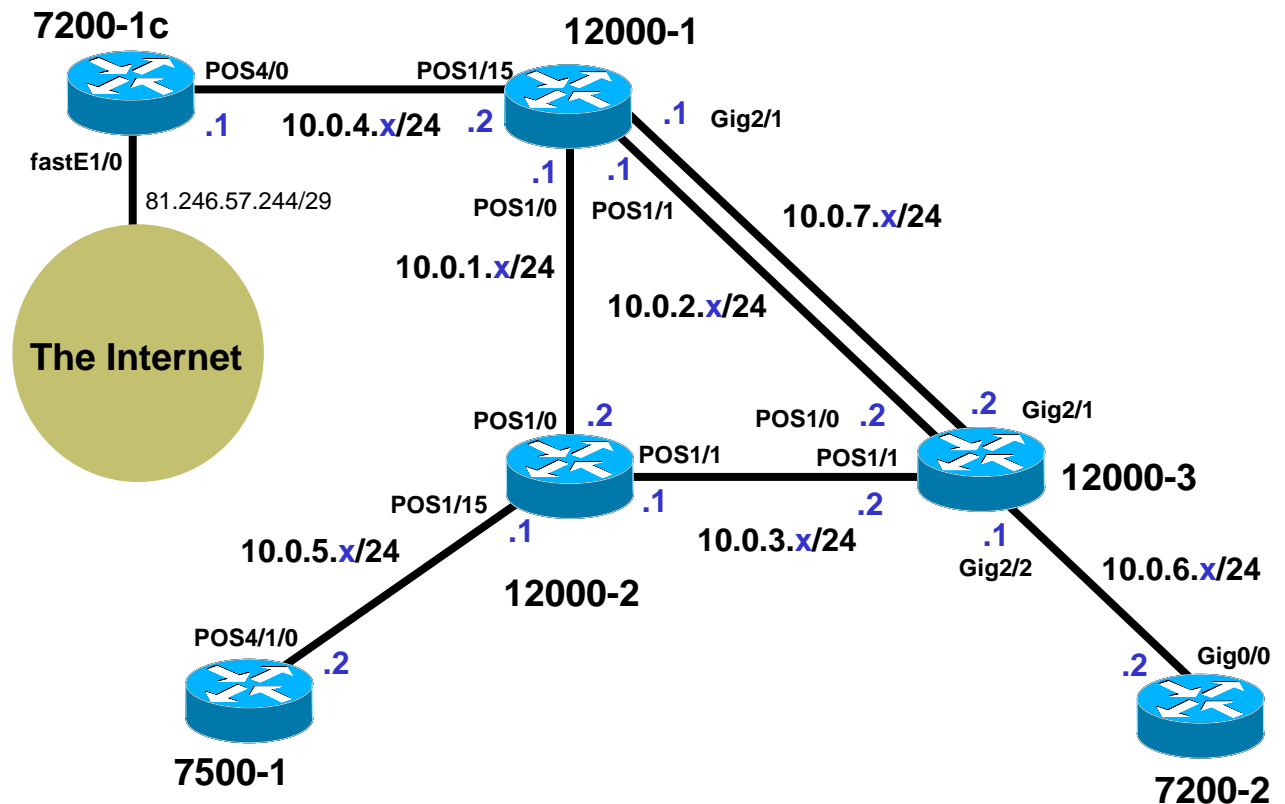

6DISS Toolkit

- Workshops (slideware + access to remote labs)
- E-learning package
- Training the Trainers manual
- IPv6 Technical Training course
- Tiger Team (helpdesk@6diss.org)
- Website
